

Preliminary

3D Optical Profiler OPS-1000

The Santec OPS-1000 optical profiling system is designed for fast, high accuracy non-contact scans of 3D objects. The OPS-1000 scanning laser based system utilizes a novel interferometric approach to deliver the ultimate in signal sensitivity, capturing surfaces other profilers will miss.

Designed to support R&D and production application the OPS-1000 comes with intuitive control software allows the user to quickly configure scan geometries and export point cloud data for analysis.

Features

1 High Sensitivity

Minimum light detection sensitivity of 100dB
Dynamic Range >70dB

3D Scan of Cylinder Head

2 Single Beam Geometry

Single Beam Geometry minimizes structural interference within shapes and structures.

3 High Speed Measurement

OPS-1000 brings high speed measurement of 400,000 points per second for complete automatic inspection.

4 Long Measurement Range

The OPS-1000 may be configured up to a measurement range 1m.

5 Ambient Light Agnostic

OPS-1000 utilizes a coherent measurement principle; so is not affected by ambient light such as sunlight or stray light in a production environment, delivering reliable data. Shapes such as the keyhole formed during laser welding can be clearly measured using the OPS-1000.

Key Hole Shape

■ Applications

- ▶ 3D measurement of materials
- ▶ 3D detection of defects
- ▶ Fully automated profiling
- ▶ Real time process monitoring

■ Performance

		OPS-1000-100	OPS-1000-50	OPS-1000-6
Resolution [μm]	XY	200	80	10
	Z	10	1	
Repeat Accuracy [μm]	XY	± 25	± 10	
	Z	± 10	± 1	
Measurement Range [mm]	Z	1000	32	32
	XY	720	180	15
Working Distance [mm]		1040	520	35
