

4 Channel Mux/ DeMux Module MDM-15

The MDM-15 is multi-channel WDM Multiplexer or Demultiplexer based on dielectric thin-film filter technology. The module is designed to add or drop 4 channels with ITU grid spacing of 100, 200 or 400GHz. Channels can be dropped with high adjacent channel isolation and all channels are subject to low insertion loss. The MDM-15 can also be configured with an additional band splitting filter to enable device cascading in DWDM systems.

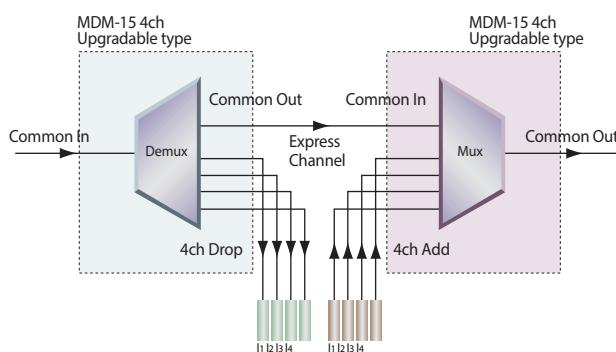

Features

- ▶ Low loss, low PDL
- ▶ High channel isolation
- ▶ Upgradable configuration suitable for scalable system
- ▶ Telcordia GR-1221 qualified
- ▶ RoHS compliant

Applications

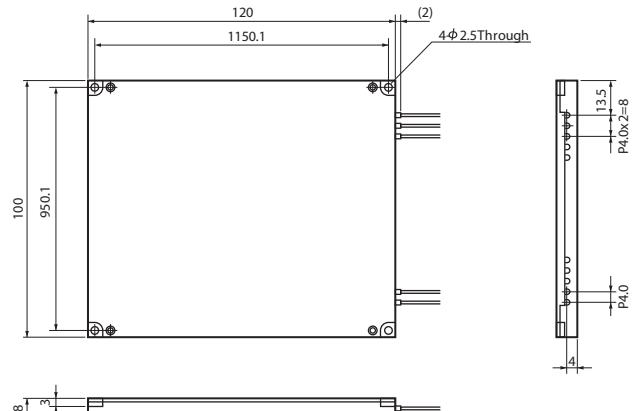

- ▶ Wavelength Mux / Demux
- ▶ Optical Add Drop Multiplexer (OADM)
- ▶ Access / Ring network system

Model Variations

In Mux and Demux configurations the filter specifications can be tailored to the end-users performance and cost requirements. The "Upgraded" MDM-15 has a common input and output port enabling an express channel for channels which are not to be dropped. Alternatively, the terminated MDM-15 (without express port) realizes lower insertion loss for each channel.
